12 months
Investment contract

30%+
Annual growth target*

*Target only. Returns are not fixed or guaranteed. Investment values can fall, and capital is at risk. Graphic is conceptual and does not represent historical performance.

01 / DISCOVER PRIMEPIP

Invest smarter.
Know how it works.

A practical introduction to the platform, the money journey and the controls available to you.

Primepip is an investment management workspace where clients register, complete identity checks, fund an account using supported crypto payment methods and allocate available wallet funds to an investment. Your dashboard brings balances, profit and loss, referrals, requests and support into one place.

Start from $100

Make an investment from available wallet funds after your profile and KYC are approved.

See your account clearly

Follow active investment, available wallet funds, profit and loss, and request history.

Build your network

Share your personal referral link. Eligible referrals may generate investment and profit rewards.

Stay connected

Use support tickets, notifications and statements to follow activity and ask for help.

REGISTER → VERIFY ID → FUND → INVEST → TRACK

Understand the product before you fund

Primepip does not promise fixed income. Funding and payouts are reviewed requests; submitting a request does not itself send crypto.

02 / GETTING STARTED

Create your account. Complete your profile.

Your route to investing begins with an account, accurate personal details and identity approval.

1

Register your Primepip ID

Open the registration page. Enter your full name, email and password. Add a referral code if you have one, complete CAPTCHA and agree to the terms and conditions.

2

Complete Profile Details

In Settings, enter your full name exactly as shown on your ID, email, contact number, city and country. Choose the correct city suggestion and check the country before saving.

3

Submit your identity document

Upload a clear, readable ID image with all four edges visible. Your document name must match your saved profile. Follow the supported file and upload instructions shown in the app.

4

Wait for KYC approval

An administrator reviews the submission. Check your KYC status and notifications. If changes are requested, correct the issue and resubmit. Add funds unlocks after profile completion and KYC approval.

A good first submission saves time

Use a strong, unique password. Save your profile before submitting ID. Email and phone verification controls may show that their service is not configured; they are separate from KYC approval.

03 / ADD FUNDS AND INVEST

From crypto payment to active investment.

Funding your wallet and investing are separate steps. Check the payment method and network carefully.

1

Choose Add funds in your wallet

After KYC approval, select an enabled payment method. The platform supports configured crypto routes such as USDT networks or Binance transfer; only options enabled in your account are available.

2

Send your payment using the exact instructions

Check the receiving address or account, network and amount. Make the payment in your own crypto wallet or exchange. A transfer on the wrong network may be difficult or impossible to recover.

3

Submit the payment for review

Enter the amount and transaction ID (TxID), upload the requested payment proof and complete the form confirmations. Keep your receipt until the request is resolved.

4

Invest after funds are credited

An approved deposit appears in Available Wallet. Select Invest, enter at least $100, review the contract and confirmations, then submit. A deposit alone does not become an investment.

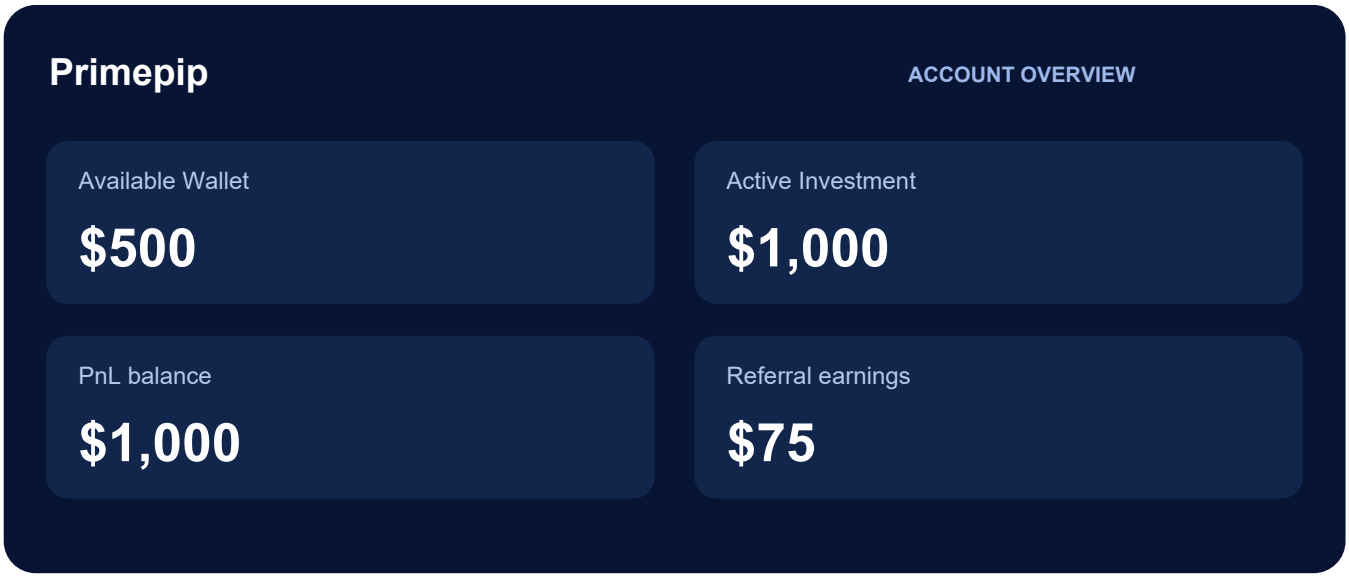

Always use the live payment instructions

Addresses, supported methods, limits and review times can change. Do not reuse an old screenshot as payment instructions. Network costs and exchange fees may be additional.

04 / YOUR ACCOUNT AT A GLANCE

Know what each balance means.

Use your dashboard and statements to follow money as it moves through your account.

ILLUSTRATIVE LAYOUT AND SAMPLE BALANCES - NOT A LIVE CLIENT ACCOUNT

Available Wallet

Funds available for supported wallet actions. Approved deposits and eligible internal transfers appear here. Pending requests may reserve funds.

Active investment and PnL

Investment tracks committed capital. PnL reflects the investment balance after profit or loss allocations and can move down as well as up.

Secure Profit

A separate balance for eligible allocated profit. Check its available amount, transfer conditions and any minimum before moving funds to your wallet.

Referral earnings

Rewards may be held or available under the referral policy. Check the breakdown and release conditions before planning a withdrawal.

05 / RESULTS AND EXPECTATIONS

A growth target. Not a promised return.

Primepip describes an annual growth target of 30%+. Actual results depend on performance and can be negative.

There is no fixed monthly profit schedule or guaranteed annual return. Review actual profit and loss entries in your dashboard. Do not treat an illustration, referral reward or previous result as a promise of future performance.

What $1,000 could look like in different scenarios

Illustration only	Change	Illustrative value
Downside scenario	-20%	$800
No growth	0%	$1,000
Target-level scenario	+30%	$1,300

These are simple mathematical examples before any charges, allocation rules or withdrawals. They are not forecasts, actual client results or a statement of likelihood. Losses can exceed the downside example shown.

If your investment falls to zero or negative PnL

An investment is not automatically closed solely because PnL reaches zero or becomes negative. It can remain open under the platform rules, and later positive allocations may offset earlier losses. Recovery is not assured. A positive available balance is needed for a withdrawal; the original capital is not guaranteed.

06 / INVESTMENT WITHDRAWALS

Your one-year contract. Your exit options.

An investment withdrawal moves an approved eligible amount into your wallet. It is different from a crypto payout.

Standard early withdrawal schedule

MONTHS 0-6

10% charge

MONTHS 6-12

5% charge

FROM 12 MONTHS

0% standard charge

Timing means before six months, six months to under one year, and one year onward. The policy can be changed for future requests. Your live withdrawal preview and the policy recorded with your request show the applicable charge.

Partial withdrawal

Available only when positive available PnL is more than $100. Your request must leave at least $100 in the investment balance. At $100 or below, partial withdrawal is unavailable.

Full withdrawal

Uses the positive available PnL permitted by the platform. It does not guarantee repayment of original capital. Review the closing effect and any included eligible balances before confirming.

$600 available PnL

Maximum partial request: $500

$100 remains

How a request is processed

Open the investment withdrawal form, choose partial or full, review the eligible amount and fee, then confirm. Pending amounts are reserved. Approval credits your wallet; rejection restores reserved funds.

07 / WITHDRAWAL EXAMPLES

See the charge. Check what remains.

Worked examples make the distinction between requested investment funds, charges and wallet proceeds clearer.

Illustration: a $500 eligible investment withdrawal

When requested	Standard charge	Net to wallet*
Before 6 months	$50 (10%)	$450
6 months to under 1 year	$25 (5%)	$475
From 1 year	$0 (0%)	$500

*Examples apply the stated charge only to the $500 requested eligible amount. They exclude any separate balances, external network fees or other applicable costs. Review your exact request preview.

Partial withdrawal: the $100 remainder rule

Available PnL	Partial withdrawal	Full withdrawal
$600	Up to $500	Subject to eligibility
$100	Not available	Subject to eligibility
$80	Not available	Subject to eligibility

Zero or negative available PnL does not create withdrawable investment funds. The current account balance and request validation determine what can be requested.

08 / CRYPTO PAYOUTS

Withdraw from your wallet. Follow the proof.

After eligible funds reach Available Wallet, request a separate payout to your saved crypto destination.

1

Save and check your payment destination

In Settings, add the supported withdrawal details for your chosen method. Verify every address character and the correct network. An incorrect destination can cause permanent loss.

2

Enter the amount and review the remaining balance

Open Withdraw in Wallet. Check the available balance, enter the payout amount and review the amount that will remain. The current wallet payout minimum is $100, subject to the form rules.

3

Confirm your request

Review the payment method and destination, type CONFIRM when requested and submit. Requested funds are reserved while pending. A rejected request returns the reserved amount.

4

View the completed payout and transaction proof

The administrator sends the payment, then records the payout TxID and may attach a proof image. Open the completed withdrawal or its activity details to view the recorded payment information.

A completed form is not a blockchain transfer

Payment is processed manually. Check the TxID on the correct network explorer or transfer service and verify receipt in your own wallet. Review time and network confirmation time can vary.

09 / REFERRAL REWARDS

Share your link. Understand your rewards.

Two referral opportunities, each subject to qualification, the active policy and available earnings.

YOUR PERSONAL REGISTRATION LINK

Copy the full link from Client > Referrals

01 Investment referral reward

A qualifying investment by your referred client may generate an investment referral bonus. The current policy determines the rate, qualification and eligible investment amount.

02 Referral profit reward

Eligible referral relationships may also receive a share linked to actual positive profit allocations. This is separate from the investment bonus and is not a fixed payment.

Invite a client using your full personal link or referral code. The client registers, completes KYC and makes a qualifying investment. Track the referral relationship and reward entries in your Referrals page. If no code is entered, the platform may apply the administrator-configured default referrer.

Agents can qualify too

Approved agents can receive eligible investment and profit referral rewards under the same applicable policy. Agent approval alone does not create guaranteed earnings.

Need to change your referrer?

Request a change of referring person in Referrals. Administrator approval is required, with a three-month gap between changes under the platform rules.

Reward rates, minimum active investment, KYC, held balances and release thresholds can apply. Check the live referral policy. The annual growth target is not the referral profit-share rate.

10 / EVERYDAY ACCOUNT TOOLS

Keep a clear record. Get help when you need it.

A useful account is more than a balance. Review your records, protect access and use support when something needs attention.

Statements and transaction details

Use Statements and Wallet activity to review deposits, investments, transfers and withdrawals. Apply available filters and export your records where supported. Keep TxIDs and receipts for reconciliation.

Support tickets and attachments

Open Support tickets, describe the issue and include relevant dates, amounts and request references. Attach a permitted screenshot or file when useful, then follow replies in the ticket thread.

Notifications that matter

Follow notifications connected to your activity and administrator messages. For a request, open its details to confirm the actual status and next step. A notification alone is not proof of received payment.

Approved agent transfers

An approved agent can send available wallet funds to eligible direct referral clients. Review the recipient and amount, then enter the required password and CONFIRM. The transfer creates a wallet record.

Protect your Primepip access

Complete CAPTCHA at login and registration. Use a unique password and keep it private. A new login elsewhere can end the previous session, and inactive sessions expire after 30 minutes. Sign out explicitly on a shared device.

Do not put passwords, recovery phrases or full identity documents in a support ticket. Submit identity documents through the KYC upload flow.

11 / START WITH CONFIDENCE

Your next step: get to know your account.

Explore the platform, read the terms and make an informed decision before committing funds.

Create your Primepip ID

Scan to register, complete your profile and begin your KYC review.

primepip-five.vercel.app

Install the app experience

Open the install page on your phone. On supported Android browsers, use Install app. On iPhone, open in Safari and choose Share > Add to Home Screen. An internet connection is required for account activity.
